

INTRODUCING SUPERDRIVE®

SuperDrive® asphalt has been specifically designed for domestic drives to give an aesthetically pleasing finish. All while being tough enough to cope with the demands of wear and tear from shear forces exerted by the turning wheels of private vehicles.

WHY SUPERDRIVE®?

HARD-WEARING

Produced to a specific grading which utilises a high coarse aggregate content providing a consistent and uniform surface finish with improved deformation resistance.

LOOKS GREAT

Offered in a range of materials with enhanced aesthetics - available in standard black and our SuperDrive Plus can be offered as red pigmented.

EASY INSTALLATION

Available in grades that produce a stiff mix, but can be hand laid. SuperDrive® Plus range offers fuel resisting properties and improved laying workability performance.

LOW MAINTENANCE

SuperDrive® is a smooth, tough, durable surface that reduces damage from frost and weed growth, requiring far less maintenance than block paving.

POWER STEERING PROOF

Highly resistant to surface scuffing providing increased durability when exposed to the effects of power steering.

ECO-FRIENDLY

Create sustainable projects – as mixes can be supplied as SuperLow warm mix asphalt.

COST EFFECTIVE

Can be laid successfully at 15mm depth, subject to technical approval, thinner laying offers excellent value for money.
